RRC supports doctors in Sudan

RRC has worked with oil and gas operating firm Petro Energy in Sudan to support company doctors wanting to perform a more industrial focused occupational health role. These doctors provide essential support to local communities and employees.

RRC's team of tutors and course developers previously prepared a 10-day bespoke course after being approached by Petro Energy. The project's three phases involved training two sets of doctors in Dubai and RRC consultants, then helping them to transfer the learning to their workplaces.

Tool-Mover manipulation device

The Tool-Mover from RUD is a manipulation device for safely turning and tilting heavy and awkward plant, such as plastic injection moulding tools.

It offers many optimal safety features, including turning the load at the centre of gravity, so it is moved smoothly and securely. The device also has a frequency controlled drive to ensure an even and smooth drive from start to finish, and it can be securely stopped in any position, even if

power to the unit is cut.

Easy to use and position, the Tool-Mover does not need to be bolted to the floor, and can be moved to different locations. Its low platform height allows tools to be cleaned easily.

Keeping trak of equipment

Safetrak, part of the Brady Corporation's safety, facilities and identification division, provides a digital system to help plan, inspect and report equipment inspections and maintenance.

One of the many applications now available from Safetrak is Book In/Out, which enables equipment to be assigned electronically from stores to a particular user. Book In/Out guides the operator through a series of checks to help ensure equipment booked out from stores is fit for use and informs operators when the next inspection date is due. The system is particularly suited to companies that house a large number and variety of equipment.

Skyguard protects Trust's lone staff

Guy's and St Thomas' NHS Foundation Trust is using Skyguard devices to protect more than 600 lone worker staff, with more being added continually.

Skyguard's MySOS device was picked to replace the previous system due to its GPS technology, which sends the alarm location during an emergency and allows staff whereabouts to be tracked by managers online via Skyguard's client portal.

As well as the SOS button, the device features speed dial buttons and voice memo, which allows staff to leave a message on Skyguard's system detailing where they are going and who they are visiting.

Keylex range for access control

The Keylex range of mechanical digital door locks from Securiskey offers the perfect access control solution for most buildings, from domestic and light commercial to heavy industrial application.

The locks eradicate the need for keys, cards or tokens. And being self-contained, all models (Mini, Light Duty, Medium Duty and Heavy Duty) are straightforward to install and, if a code is compromised, reinstating security is quick and easy.

There is no need for wiring or batteries and the stainless steel buttons ensure combination usage is not indicated.

Arco wins bronze

Arco is proud to announce that its Hull-based national distribution centre (NDC) has obtained bronze status in the Healthy Workplace awards for its dedication to the health and wellbeing of its staff.

Evidence of Arco's long term healthy workplace commitment includes daily health tips, fruit and smoothies made available to all staff, and the introduction of support groups for anyone trying to quit smoking.

Eight NDC staff members also volunteered to become health champions and underwent additional health and wellbeing training to allow them to carry out their new role effectively.
