## Wireless gas detection

Crowcon's Detective Net wireless module allows up to 25 Detective+ gas detectors to be linked without cables and positioned as far as 20 metres apart.

Ideal for use in the oil, gas, petrochemical and utility industries, the Detective+ is a free-standing, transportable multigas monitor that can be used individually or in groups to monitor up to four gases at once.

Should wireless connection between two of the detectors weaken, the RICOCHET wireless network will "self-heal" and automatically re-route communications via alternative devices.

## Spreading awareness in Sudan

As part of its aim to achieve safer working in Sudan, RRC Training Middle East (RRCME) held a successful two-day conference, 'Enhancing health, safety and environmental (HSE) culture for sustainable solutions', in Khartoum.

Excellent audience participation and networking opportunities were the order of the day from the 200-plus delegates. Among the areas highlighted were the importance of HSE to Sudan's government, the increasing need for local training, the damaging effects of accidents on the country's economy, and the need to modernise its HSE law to international standards.

## Castell hosts channel partners forum

As part of its global sales growth strategy, Castell Safety International has hosted a forum for its network of international distribution/channel partners.

The event saw channel partners receive training on trapped key interlocking, undertake a manufacturing facility tour, and attend presentations focused on Castell's product development, vertical market strategy and emerging applications.

Channel partners, which span more than 20 countries on four continents, gave presentations on their own markets and Castell success stories, which encouraged discussions on new opportunities across the distribution network.

## Going for gold at pro clothing awards

The Professional Clothing Awards is going for gold in 2014, with Ruth Morris, uniform manager for the Rugby World Cup 2015, confirmed as its host.

The show, which celebrates achievement in the workwear, corporate wear and PPE industry, is honoured to welcome Morris centre stage for the awards evening at the Hilton Birmingham Metropole on 1 April.

Morris previously managed the uniform programme for London 2012, and the Olympics celebration will filter through to the catwalk at the Professional Clothing Show with games makers' uniforms featuring live on stage.

## Fog free vision with JSP's Thermex

JSP has introduced the Thermex safety goggle to the market.

The Thermex is designed for the harshest work environments, to protect the wearer against fine particles, chemical splash, molten metal and extreme temperatures, without misting up.

Boasting two tough, distortion-free, Optical Class 1 lenses, the Thermex offers clear vision, even at extreme temperatures of +50° Celsius and -40° Celsius. Its K- and N-class permanently-coated polycarbonate outer lens incorporates scratch resistant and anti mist technology, while the N-class acetate inner lens also ensures fog free vision. They are fully compatible with most industrial safety helmets and bump caps.

## Convenience for electrical testing

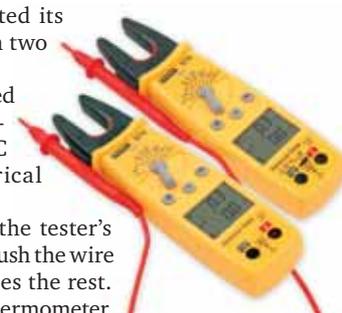

Martindale Electric has boosted its family of test instruments with two additional electrical testers.

The ET5 and ET4 are intended to make testing more convenient with accurate AC and DC current, voltage and electrical continuity testing.

There is no need to open the tester's jaws with these tools; you just push the wire down the fork and the tool does the rest. The ET5 can also take k-type thermometer probes, making it an all in one tool for most applications.

Both testers have dual displays and can indicate volts and amps simultaneously, and also come with auto off functions which disable them after inactivity.
