

THREE POINT TRACEABILITY PADLOCK FROM LOTO SAFETY

LOTO Safety Products JLT launches the Three Point Traceability Padlock (3PTP). It combines several innovative features to provide enhanced traceability and reduce downtime during enforcement of lock out tag out programmes involving thousands of padlocks. The 3PTP addresses padlock to key traceability with the following steps: key system engraved on key and moulded on padlock body; key number is engraved on key and padlock body; and colour coded key jackets to identify a particular key to its padlock. Purpose designed key hole cover and polymer bushes mounted on padlock shackles resist ingress of moisture, dirt, grime and dust into padlock body. The traceability and weather resistant features make the 3PTP safety padlock a versatile padlock in lock out tag out programmes. ■

ANTI-FATIGUE MATS – COMFORT YOU CAN FEEL

Portwest's anti-fatigue matting is ergonomically designed to reduce the stress caused by long periods of standing. By actively working the legs, the mats increase blood flow to an ideal rate and prevent numbness and aching in the feet.

The mats' cushioning properties provide a soft, comfortable surface while enabling users to maintain the correct posture, allowing them to work for longer with less fatigue.

Portwest will exhibit the new MT50 and MT51 mats at ADIPEC 2014 on its stand 8250D. ■

RRC LAUNCHES PIONEERING NEBOSH COURSE IN COLOMBIA

RRC International, and its partner, the Latin American Industrial Safety Training Organisation (LISTO), have just introduced their first ever face to face NEBOSH International Technical

Certificate in Oil and Gas Operational Safety (IOG) course in Colombia. The ground breaking course, which will be held in Medellin, Columbia, is new to Latin America and has already attracted delegates from other countries in the region. The globally respected IOG course is specifically designed for supervisors, managers, safety representatives and advisers responsible for health and safety, both onshore and offshore in the oil and gas industry. Focusing on international standards and management systems, the IOG certificate will enhance the professional standing of oil and gas professionals in the growing economies of the Latin American region. ■

5TH ANNUAL MIDDLE EAST FIRESAFE CONFERENCE

Supported by the Directorate General of Civil Defence Dubai, the 5th Annual Middle East FireSafe Conference reinforces on the importance of codes and standards for value based fire engineering. Scheduled for October 20 - 22, 2014, the forum takes key lessons from takeaway sessions from past editions and throws the focus onto new techniques employed in fire components, analysis, investigation and reporting. Ensuring that the functionality of fire safety benchmarks in Middle East is met, the event will host dignitaries from government, as well as sectors including oil and gas, utilities, manufacturing and infrastructure. ■

EFFICIENCY MANAGEMENT

In lean manufacturing, the general rule of thumb is that anyone should be able to enter the facility and identify the flow of work within 60 seconds. With facility labelling, you can make sure your employees don't lose valuable time looking for tools, spare parts or wondering how to re-order supplies. Strategic, colour-coded facility identification labels can take your production efficiency to the next level. Customers report productivity increases of up to 35%, as well as improved on-time delivery, reduction in waste and savings 10 times higher than what was invested. ■
