

Getting connected

Casella will showcase its recently launched dBadge2 personal noise dosimeter and Apex2 personal sampling pump at Health and Safety North.

Connected via the Airwave App to a mobile device, the dBadge2 makes monitoring personal noise exposure methods simple and enables noise measurement in real time and without disruption to workers.

Apex2 is said to combine class beating performance with a slim ergonomic design and Bluetooth low energy, so users can view or send data and control the pump from a smartphone. Like the dBadge2, the units also include a motion sensor to facilitate wearer compliance.

Four solutions, one platform

Having specialised in e-Learning solutions for many years, Safety Media has introduced new software that comprises four modules built within one simple-to-use online platform. Modules include:

- E-Learning – More than 100 courses, 80 of which are RoSPA approved Health & Safety titles.
- Incident Reporting – Registered staff can log in and report accidents or near misses in a few simple steps.
- Risk Management – Relevant people can build and complete business-wide risk assessments and report on risks completed as part of the Safety Media risk checklists function built.
- Audit tool – The ability to build and distribute audits to global sites from a central location. Stand G28

By using J alas safety footwear in combination with J alas FSS insoles, Ejendals believes it should be possible to avoid many foot, knee, hip and spine related problems caused by environments such as concrete floors in combination with poor shock absorption in safety footwear.

Holistic approach to insoles

FSS insoles are adapted to three different arch heights and are auto corrective when it comes to overpronation. All the insoles are certified for use inside safety footwear marked with the J alas brand name.

Pressure mapping with an FSS foot scanner takes 15 seconds. Two different versions are available – a portable and a stationary option.

FSS is said to offer a solution to many long term foot-related issues and is a servicethat comes to you.

Ejendals will be exhibiting at Health & Safety North: Stand K22

Environmental monitoring

Available from TSI Incorporated, the Environmental DustTrak Aerosol Monitor is a built-for-purpose solution that facilitates accurate, long-term outdoor environmental monitoring.

Conveniently packaged in three configurations, this monitoring solution makes it easy to setup and quickly begin monitoring levels of PM10, PM2.5 or both simultaneously.

The system is housed in a compact, weather-proof enclosure

for protection of the newly enhanced Environmental DustTrak Photometer along with newly designed robust key components. The long-life pump, built-in auto zero module, and optional heated inlet and internal heater accessories are said to enable longer runtime and measurement accuracy and have the ability to accommodate varying temperatures and humidity. QEHs management software

Built from the ground up, the first module of enviroMANAGER from Scannell Solutions – enviroLAW – was released in 2003 and was soon followed by the RISK and INCIDENT modules.

Today, enviroMANAGER, with a full suite of modules, is in its fourth full release. It provides a fully integrated enterprise solution that is designed and built by QEHs professionals to enable organisations to conform to legal and other requirements, reach sustainability goals and to drive

excellence throughout their business.

Scannell Solutions says key differentiators of its enviroMANAGER versus other software solutions are the fully integrated workflow design and the base line of legal content as a key component of the workflows across the various modules.

Fully mobile-enabled with SaaS, delivered or hosted versions are available to fulfil all IT preferences. Stand K24

Anti-vibration glove

Impacto Protective Products

specialises in the design, manufacturing and distribution of custom ergonomic products to help prevent cumulative trauma and repetitive strain injuries.

A recent addition to its ergonomic hand and wrist protection line is the AVPRO anti-vibration glove.

The mechanic style glove combines comfort with a good fit. Full finger style boosts hand protection. The glove is padded, with patented foam technology in the palm, fingers, thumb and thumb/web area to help prevent Hand-Arm Vibration syndrome and White Finger Disease.

It also features a non-slip textured palm with elasticised back, and elastic wrist with adjustable hook and loop closure.

Think training - and more

Visitors to RRC International's stand at Health & Safety North won't just find all the information they need on RRC's expanding range of health, safety, environment and quality training products – they will also have the chance to win prizes and pick up free items.

Those who register their interest in one of the company's courses will be given a free pair of RRC-branded JSP safety glasses (while stocks last).

They can also enter a prize draw to win a free IOSH Leading Safely course for delivery in-house to up to 10 senior managers.

And, of course, visitors will be able to take away samples of RRC's training materials and classroom and e-learning courses. Stand E14
