

Metatarsal boot

According to **Goliath Footwear**, where there is deemed to be a higher risk of foot impact its **Force metatarsal boot** offers

comprehensive all-round protection by implementing the best known technology and safety features such as an aluminium toe cap and a textile protective midsole D30 to provide 'intelligent' metatarsal protection. The D30 material is implemented in the lining of the boot so that in standard conditions, the molecules flow freely, allowing the material to remain soft and flexible, but on impact,

they lock together to absorb impact energy and reduce the force transmitted, the firm claims, so the wearer will feel the D30 material flexing and moving whilst working yet will provide the optimum protection against the impact of heavy objects.

Injected Dual Density Rubber Soling delivers a tough rubber outer sole to protect from nicks and cuts and 300°C heat, and an air injected rubber mid-layer provides a cushioned comfort for the foot, while the 'Rubber/Rubber'

sole material combination provides optimum protection in hazardous environments such as heavy engineering, construction and manufacturing, the company says.

The footwear has been independently tested to gain European standard accreditations, exceeding safety requirement EN ISO 20345:2011 S3 M CI HI HRO SRC, according to the firm.

Training & consultancy

RRC International says it will have a full team on its stand at this year's Safety & Health Expo to answer any questions on the firm's training and consultancy services.

Also on the stand will be *Health & Safety at Work for Dummies*, a collaboration between RRC and the famous 'Dummies' publisher, John Wiley & Sons. Books will be for sale plus there will be

daily prize draws to win copies.

For those unable to attend the event, the company is holding a Virtual Expo, featuring photos and videos of the exhibition, exclusive interviews with the on-stand team, including some surprise guests, and special exhibition discounts.

Safety clothing

Tranemo Workwear has launched the new **TeraTX FR** range, made from advanced inherent flame-retardant and antistatic material and available in both high-visibility and non-high-visibility options. The range includes clothing specifically for the utility and power sectors that contains no metal components.

According to the firm, as the fabric weight is only 260gm it is extremely comfortable to wear, yet still offers superb durability and performance due to its rip-stop construction. The garment range offers both trouser, jacket and boilersuit options.
