

Safety Cloud storms ahead

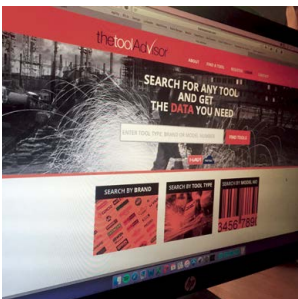

Now in its eighth year, Safety Cloud, the popular web-based health and safety management system from Southalls has been modernised and updated, with a cleaner, fresher look and new features including a safety observations module, an integrated assistance feature and employee notes functionality.

Uniquely developed by experienced health and safety professionals, Safety Cloud is customisable to the specific needs of individual clients and provides complete and instant visibility of current compliance. The addition of the safety observations module allows staff to raise any safety concerns or comments that they have with their manager. Once the comment has been entered the manager will be alerted, allowing them to oversee and investigate the issue if needed.

The Tool Advisor launched by HAVi

Hand-arm vibration specialist HAVi has launched a database that acts as a complete power tool catalogue.

Regardless of the size of your business, if you have choices to make regarding the types of tools your employees require on a wide range of jobs, HAVi's data will be invaluable. Users can browse an ever-growing range of tools and accessories – anything from drills

to impact drivers – to find accurate details on equipment.

It is easy to check vibration magnitude values and the lowest vibration tools around, based on HAVi's raw collated data, data issued by the manufacturer and user reviews.

RRC goes from strength to strength

RRC's partnership with Birmingham based safety and environmental training provider British Safety Services (BSS) started in April this year and is proving hugely successful for both RRC and BSS customers.

After many years of informal collaboration RRC and BSS are both now working together under the same roof in Birmingham. RRC is now sharing BSS's training and administration facilities and is looking after the day to day running of BSS's UK operations.

This autumn will see RRC's NEBOSH Certificate, Diploma and IOSH classroom courses move to the BSS training centre where its team will be able to provide an additional level of service so much appreciated by its London customers.

Reactec grasps growth opportunity

A leading technology firm is targeting further growth following agreement on a new funding package.

Reactec's groundbreaking technology, HAVWEAR is the first wearable device of its kind in the UK. With the support of the Reactec analytics reporting software platform, HAVWEAR provides constant monitoring with automated reporting to indicate any exposure risk and enable employers to take preventative action. Reactec's technology is already in use by a number of leading companies in the construction sector, including Network Rail, Murphy Group and Balfour Beatty.

Speakers inspire at H&S North

Visitors to this year's Health and Safety North 2016 will be able to participate in two interactive sessions, which have been designed to inspire positive health and safety behaviour. The sessions, which are part of a free-to-attend conference curated by the British Safety Council, will take place at the Bolton Arena on 12–13 October.

Harry Gallagher and Shaun Curry from training providers Macnaughton McGregor (aka 2Macs) will be hosting a scenario-based workshop in the final session on day one, and on day two an interactive session by Mark Davies, managing director at consultancy 7Futures, will draw on his extensive experience of working with elite performers, sports personalities and the military to offer practical advice on resilience building so that delegates can learn how to successfully manage stressful situations.

Keep your cool with JSP's bump cap

The HardCap AeroLite from JSP is the lightest, best performing, full shell Bump Cap on the market weighing less than 135g. It is designed to be worn where there is a risk of impact to the front, top and also scrapes to the side of the head from stationary objects.

The AeroLite has been created to be extremely lightweight and comfortable, which is of great importance for individuals who need to wear bump cap protection for long periods of time in today's busy, stressful environments. The sleek textile cover has large open weaved panels to facilitate the transfer of cool air to the head reducing heat build-up and discomfort.

The cap is adjustable to fit head sizes from 53cm to 63cm and available in black or blue, with either a 50mm or 25mm peak.
