

Eyecare valued for health benefits

Research by Specsavers Corporate Eyecare has shown that around half of employers believe staff value the check on the health of their eyes as a fundamental part of any eye test.

More than a third of the 500+ employers surveyed said their workers value the check on their overall health, which is a vital element of the eye examination. An optometrist is able to see changes to the blood vessels in the eyes, which may be indicative of changes elsewhere in the body. In this way, eyecare can help with the detection and monitoring of much wider health conditions such as diabetes, increased blood pressure and cardiovascular disease.

Are your castor wheels contaminated?

Wheeled units are used by most organisations, but they often harbour a dirty problem. Inventor Nick Davis has created the world's first injection moulded, fitted and self-sealing wheel cover to protect from debris building up on the wheel during movement.

The cover is designed to prevent contamination of castor wheels within the food, pharmaceutical, biological, medical, automotive, aerospace, optical, nanotechnology and military industries, as well as laboratories.

Nick will be demonstrating Silicone Hygiene's Castor Wheel Cover at the International Food & Drink Event and The Cleaning Show at London's ExCel, and The Health & Safety Event at the NEC in Birmingham.

JSP's new Ridgeback Speed Ramp

With more than 50 years of experience in manufacturing traffic management products, JSP has launched the new Ridgeback Speed Ramp – a durable speed ramp which will keep visitors and employees safe by reducing vehicle speed on site, improving safety conditions in residential and commercial areas.

The Ridgeback Speed Ramp is easy to assemble using a clever interlocking system for easy connectivity and to maintain stability. The channel on the underside of the endcap allows safe passage of wires or hoses, protecting them from heavy duty vehicles.

New safety message mats range

Premium floor matting supplier First Mats has unveiled a range of safety message floor mats designed to bring a heightened level of health and safety compliance to commercial and industrial workplaces around the country.

The innovative safety message mats highlight potential dangers and communicate essential safety information such as fire escape locations to staff and visitors with highly-visible messaging that simply can't be missed.

The new First Mats range is available in a choice of five different standard safety messages, all inspired by common industrial safety signs, warning of forklift truck operation, ESD hazards, ear protection or hard hat requirements as well as a fire exit floor mat.

Zurich teams up with Specsavers

Leading insurer Zurich has appointed Specsavers Corporate Eyecare to provide Display Screen Equipment (DSE) eyecare and prescription safety eyewear for engineers based at its Birmingham office.

Zurich required DSE eVouchers for office-based screen users, and Safety Eyewear eVouchers for those needing personal protective equipment (PPE) working in the field. The DSE eVouchers offer a simple way for Zurich engineers to receive an eye examination and glasses.

eVouchers for prescription safety glasses offer engineers the benefits of high-quality, robust, stylish safety eyewear to match their every-day glasses – whether bifocal or varifocal lenses.

Engineers can choose from Specsavers' full range of safety eyewear, including JCB branded safety eyewear, so engineers can try on styles for comfort and fit.
