

Hands-on advice

Workers can expose their hands to a number of hazards that can impact on their ability to be able to carry out day-to-day activities at work.

Polyco, an industry expert in hand protection, will be at Health & Safety North to showcase a new collection of gloves developed for workers, including: Monza, Imola, Polyflex Ultra, Grip It Oil, Grip It Oil C5 and Dyflex Plus N.

As well as sampling Polyco's latest range of gloves, visitors will be able to find out about the company's Hand Protection Assessment Survey (HPAS). Free of charge to companies with 50+ employees, this service helps employers to identify the most suitable hand protection for the job.

RRC INTERNATIONAL

Set sights on training

Visitors to RRC International's stand at Health & Safety North will be able to explore the company's large and expanding range of health, safety, environment and quality training products, and chat to their knowledgeable and experienced staff. Those who register an interest in one of RRC's courses will be given a free pair of RRC-branded JSP safety glasses (while stocks last). They will also be offered the opportunity to enter a prize draw to win a free e-learning NEBOSH Health and Wellbeing Certificate course.

Visitors will also be able to take away samples of RRC's highly respected training materials and classroom and e-learning courses.

For more than 50 years, the goal of GfG has been to meet the highest demands of occupational health and safety, industrial equipment reliability and environmental protection by developing reliable and innovative gas detection systems. Under this aim, the GMA200 was developed. The GMA200 can be used autonomously or integrated into a production process.

The GMA200 can be wall or DIN rail mounted and is capable of monitoring 16 transmitters and in conjunction with the GMA200 relay

Gas detection

module, a further 64 free programmable relays are available.

Maximum flexibility and process coverage is achieved by the cross-linking ability of several GMA200 controllers and data transfer options. For additional safety, the GMA200 has an optional built-in data logger, which permanently stores individually configurable intervals, measured values, average values, alarm events and faults.

Treat your feet

Walking on hard tiled or concrete surfaces takes its toll on the feet as well as the ankles, knees, hips and lower back. This constant pounding can cause pain, discomfort and fatigue. We aren't helped by our shoes and over time the development of serious disorders like arthritis, heel spurs and Plantar Fasciitis can lead to people being forced to take weeks off work.

One solution could be **Sole Mates'** massaging insoles. Instead of using gel or foam, liquid orthotics use a bladder containing glycerine to provide support for the foot.

Moulding to the individual foot, the insoles provide support to the arch as well as the heel and ball of

the foot. Acting like a shock absorber in the shoe, they also relieve pressure on the joints.

Gently massaging the muscles in the foot, the fluid is also said to help to reduce tiredness caused by standing or walking.

Monitor multiple hazards

SKC's range of passive samplers are a small and economical way of monitoring multiple hazards. SKC has validated the sampling rate of the passive samplers, along with other critical sampling parameters, to provide documented proof of

reliability that meets the requirements of many HSE, NIOSH and OSHA methods.

Individual chemicals diffuse from the atmosphere into the sampler at a fixed rate, eliminating the need for a sample pump, and offering unobtrusive personal monitoring.

New for 2014 is the UMEx 300 for Ammonia. With its 39.92 ml/min sampling rate, the sensitive UMEx 300 detects ammonia to 2.4 ppm for a 15-minute sample, 0.075 ppm for an eight-hour sample, and 0.025 ppm for a 24-hour sample.

Noise & vibration meters

Svantek will be showing a wide range of high performance noise and vibration monitoring instrumentation at Health & Safety North 2014.

This includes its newly launched SV103 personal vibration dosimeter which accurately measures the vibration dose received by the operator, and the SV104 personal noise dosimeter with octave band analysis.

Said to be the smallest class 1 sound level meter on the market, the SV971 device will also be on display, along with the SV106 eight-channel human vibration meter, which is said to set a new benchmark in affordable hand-arm (HAV) and whole-body (WBV) vibration.

Sound out specialists

Delegates visiting Cirrus Research at Health & Safety North will be able to speak to the team of trained noise specialists who will be showcasing the latest Cirrus products, both designed and manufactured in the UK.

Cirrus will be demonstrating its Optimus range of high performance sound level meters, as well as doseBadge, a wireless personal noise Dosimeter for occupational noise.

Group marketing manager James Tingay said: "Our sales team will be on hand to explain and demonstrate the Cirrus approach that covers every aspect of noise monitoring, data collation and after sales support."
