

LISTERIA MANAGEMENT

Holchem, the provider of hygiene products within the UK and Irish food manufacturing sectors, has added a Level 3 Listeria Management course to its training portfolio.

Listeria has been highlighted as a major 'area for attention' in the FSA's strategic plan for 2015/20 – and Holchem has used its core expertise to raise industry awareness of listeria and also provide training for industry professionals. This nationally accredited two-day course is aimed at hygiene, technical, engineering and production managers directly involved in the day-to-day management of Listeria within the food sector.

The stand-alone course in the UK and Ireland adheres to the current FSA's strategy in helping to control Listeria.

Listeria is widespread and the pathogen itself can be found in a wide variety of contaminated foods, particularly those manufactured within the chilled ready-to-eat sector.

WATER JETTING TRAINING

It is a basic requirement under Health & Safety Law that employers ensure that employees are adequately trained in the safe use of all equipment. Do you know the possible hazards of your power washers?

At 1000psi the water jet can reach a speed of 110mph and at 4000psi it travels at 440 mph (half the speed of a bullet). As water is incompressible, water travelling out of the lance at these speeds may carry a risk of serious injury. **Hydro Project Engineering** provides on-site training for operators. All candidates attending its courses and passing the required standards receive Water Jetting Association certification and photo cards accredited by City & Guilds.

According to the company it is vital to ensure that operators receive the appropriate information and training required. No task is too small or too large to disregard correct training, be it 1000psi or

40,000psi. Hydro Project Engineering says it can provide operators with the information and skills required to reduce the risk of accidents in the work place.

'NOISE AT WORK' TRAINING COURSE

According to **Casella**, you can save time, money and comply with the Noise at Work Regulations (2006) by training a competent member of staff to monitor noise in your workplace, on its one day 'noise at

work' training course.

As well as hands-on training on the use of personal noise monitoring devices known as dosimeters, Casella's noise course gives participants the opportunity to learn how to turn the dosimeter readings into values that help them determine the most appropriate form of hearing protection, if required, for the worker. At the end of the one day course, participants sit a test and once completed successfully are awarded a certificate in measuring and reporting of noise in the workplace.

The next 'noise at work' training courses will take place at Casella's head office in Bedford on the 23rd February and 12th May. More training courses will be announced soon.

NEBOSH IN SPANISH

RRC has formed a partnership with leading Spanish safety training & consultancy provider Elinor.

Based in Asturias, Northern Spain, Elinor delivers services throughout Spain and have a developing reputation in South America.

Elinor initially collaborated with RRC in 2015 to provide online NEBOSH English Language courses throughout Spain with exam centres in Asturias, Madrid, Barcelona, Valencia and Bilbao. This proved very successful but also identified more opportunities for RRC and Elinor to collaborate.

It was obvious that training in the English language was limited in Spain so Elinor and RRC have developed

the NEBOSH International General Certificate in Spanish.

Classroom courses are now available in Spain and the Spanish speaking tutor team are happy to travel throughout the world to deliver in-company training.

Work is also underway on the development of on-line and distance learning courses in Spanish which will be available in the first half of 2016.

CRISIS RESPONSE COURSE

Road safety charity **Brake** is inviting executive management, HR professionals and fleet management personnel to attend an essential crisis response training course.

The one-day training course, sponsored by international law firm Kennedys, takes place Wednesday 2 March 2016, in central London.

The training will cover the procedures organisations should have in place to provide support to employees following road crashes and other sudden, traumatic events.

Kennedys partner Radd Seiger and specialist disaster management trainer Rosie Murray will deliver the course on Brake's behalf, sharing their knowledge, experience and expertise in the practical and procedural issues that follow a crisis event involving sudden deaths or serious injury and the emotional needs of all those affected and how to support them.
